SOLANA // SERIAL OPERATORS // LIVE

TRENCHWATCH

We name the operator behind the launch.

Real-time detection of serial operators and their bots on Solana launchpads. Available to license, with partner programs for resellers and integrators.

BY EMERGE · PUBLIC OVERVIEW · OCTOBER 2026

A small group of operators launches a large share of tokens.

42%

of the 23,783 launches we tracked came from creators already in our operator registry.

520

serial creators and operators identified across five Solana launchpads.

First

Their bots buy in the opening moments, before most users have seen the token.

Platforms that see this early can protect their users, and the trust that keeps them coming back.

Four steps, from launch to a decision a team can make.

01

Detect

Every new launch on supported launchpads, as it happens.

02

Attribute

Links the creator and early buyers to known operators and their wallet clusters.

03

Alert

Telegram, email or a signed webhook, within seconds of the launch.

04

Evidence

Each alert carries the on-chain trail behind it, ready for review.

From a launch on-chain to an alert on the client’s side.

ON-CHAIN
A token launches

→

LIVE
Trenchwatch sees it

→

REGISTRY
Matched to known operators

→

CLIENT
Alert with evidence

Clients receive

The alert, a risk level, the operator ID and the on-chain evidence.

We keep private

The detection method, so operators cannot learn to avoid it.

Readable by a person, parseable by a machine.

OPERATOR LAUNCH · HIGH +3.4 s

Operator TW-9001 launched a new token

Token 7xKp…3fQa

05 / COVERAGE

Live on the launchpads where Solana tokens are born.

5
launchpads covered live

23.8k
token launches recorded

188k
early purchases analysed

3.8 s
median time from launch to alert

PUMP.FUN · METEORA · LAUNCHLAB · BAGS · BONK.FUN

06 / OUT-OF-SAMPLE TEST

Who is behind the launch, in time to act.

Measured on 15–16 October 2026, registry frozen beforehand	Result
Watcher alerts on operator-backed launches	68 in 2.6 h of live data
Median time from launch to alert	3.2 s
Outside wallets buying after the alert (first 15 s)	1,202 · 561 SOL
Creator came out ahead (flagged vs unflagged, same activity)	96% vs 69%
Operator buying its own token: launches fine for buyers	0 of 25

Trenchwatch attributes launches; it does not predict price. Serial operators almost never lose. Both results are preliminary and are being re-measured on a new period.

07 / INTEGRATION

Plugs into the tools a team already uses.

Telegram and email

For trust and safety teams. Live from day one, no engineering needed.

Signed webhooks

Alerts pushed to the client's systems, verifiable and retried automatically.

REST API and sandbox

Query alerts and operators; test with synthetic data before going live.

API documentation is in this repository. Test keys and sandbox access are available on request.

08 / WHO IT IS FOR

One feed, several teams that need it.

Who	What they get
Launchpads	Early warning on serial operators using the platform
Wallets	Context to show users before they buy
Trading terminals	Operator labels next to every new token
Security and analytics firms	A live operator registry for Solana launchpads

09 / WHAT IS BUILT

A working product, running today.

Live collectors

Five launchpads, read in real time.

Operator registry

Serial creators and their linked wallets, updated continuously.

Alert engine

Risk levels, Telegram, email and signed webhooks.

API and sandbox

REST API, OpenAPI spec and synthetic test environment.

Validation framework

Frozen snapshots measured against comparable tokens.

Data library

Daily history of launches and early trading since October 2026.

Principles we hold ourselves to.

Public data only

Everything comes from the public Solana ledger.

Addresses, not people

We identify wallets and patterns, never individuals.

Client data stays private

Each client sees only its own alerts and reports.

On the platforms' side

We work with platforms to protect their users.

Three ways to work with Trenchwatch.

PLATFORMS

License

Alerts and API for your platform. Start with a free case analysis from your own launchpad.

RESELLERS

Partner

Integrators, agencies and advisors: introduce Trenchwatch to your clients and share in the revenue.

STRATEGIC

Collaborate

Security and analytics firms: integrate the operator registry into your own products.
